PROFILE

I am an Information Systems Engineering undergraduate at SLIIT with 2 years of experience in project management, business analysis techniques, and problem solving. I have worked on multiple projects and presentations related to different business and software systems, developing strong analytical, communication, and teamwork skills. My career goal is to become a Business Analyst or pursue a related role where I can bridge business needs and technology solutions.

WORK EXPERIENCE

Sliit Malabe

Project manager for the Bakery system

(JUNE 2024)

- Develop and execute bakery management system with functions such as order tracking, payment handling, custom cake booking.
- Led the project team in planning, organizing, and monitoring development activities throughout the project lifecycle.

Sliit Malabe

Business analysis for study cases

(June 2024 - Present)

- Conducted business analysis for multiple case studies by identifying business requirements and analyzing existing processes. Created documentation and proposed solutions to improve system efficiency and support business objectives.
- Analyzed various business case studies to identify problems, gather requirements, and recommend effective solutions. Prepared reports, process models, and presentations to support decision-making and system improvements.

Dp education

Java , Python language skills -- (JUNE 2024)

- Develop and maintain strong relationships with partners, agencies, and vendors to support marketing initiatives.
- Monitor and maintain brand consistency across all marketing channels and materials.

PROJECTS

Travel Management System : Full stack development | May 2026 Individual Project

- Developed a full-stack travel management web application that allows users to explore destinations, search travel packages, make bookings, and submit travel inquiries.
- Designed and developed an administrative dashboard for managing travel packages, bookings, and customer requests.

- Tech Stack Used - Node.js , Express.js , MySQL , HTML5 , CSS3 , Javascript

Healthcare Customer Care System | Group Project |

November - 2025

- Developed a web-based Healthcare Customer Care System as part of a team project to improve communication and support services between healthcare staff and patients. My part was customer support manager role and system was designed to streamline patient inquiries, support requests, and service management through a centralized platform.

Key Features :-

Patient and staff account management
Customer inquiry and support request handling
Healthcare service information management
User-friendly web interface
Secure access to system features and records
Improved communication between patients and healthcare providers

- **Tech Stack Used - Node.js , Express.js , MySQL , HTML5 , CSS3 , Javascript**

Bakery Order & Custom Cake Booking Platform | Group Project |

July - 2025

- Designed and developed a web-based Bakery Order & Custom Cake Booking Platform that enables customers to browse bakery products, place online orders, and customize cake designs for special occasions. The platform streamlines the ordering process by providing product management, order tracking, and customer interaction features. Collaborated with team members throughout the software development lifecycle, including requirements gathering, system design, implementation, testing, and documentation.

Key Features :-

Customer registration and login
Online product catalog and shopping cart
Custom cake booking with design preferences

- **Tech Stack Used - Java , CSS , JavaScript , MySQL**

Software Engineering for the study case | Individual Project |

May - 2025

- Conducted a comprehensive Software Engineering analysis of a Travel Management System study case by identifying and documenting functional and non-functional requirements, analyzing system behavior, and designing UML Use Case, Activity, and Sequence Diagrams to model user interactions, business processes, and system workflows.

- **Diagrams Used - Use case diagram , Activity diagram , Sequence diagram**
